Provide Sustainable Support

To ensure long-term societal resilience sustainable institutional support is required to:

- Establish a unified operational and strategic framework;
- Provide the tools to decentralize and democratize the information sphere.

Establish a Unified Operational and Strategic Framework

To harmonize the diverse adoption and understanding of FIMI tools (e.g. DISARM, STIX, OpenCTI, ABCDE, AI, narrative analyses) across countries:

- Develop a standardized taxonomy and terminology for FIMI incidents, responses, and reporting to ensure consistent communication and analysis.

- Distribute an OpenCTI starter kit with pre-configured TTPs, datasets, and standardized reporting templates to streamline adoption.

- Publish best practice guides, regularly updated knowledge and trend databases, and tiered response frameworks to support coordinated action.

- Implement certified training programs with structured learning paths to enhance expertise in FIMI detection, analysis, and response.

Provide the Tools to Decentralize and Democratize the Information Sphere

Countries adopt varied approaches to managing the information sphere. To promote resilience and inclusivity, adopt these common principles:

- Enhance platform accountability;

- Establish Resilience Councils as all-of-society participation hubs to foster collaborative policy-making, leveraging their outputs of evidence-informed analyses and citizen reflections;

- First, enhance citizen democratic competences. Then, enhance specific literacies (e.g. media and information literacy, digital literacy, AI literacy - starting from multipliers such as teachers & citizen education).
